

Website traffic analysis

Project link: [Website traffic analyzer](#)

Website Traffic Analysis Project – Complete Explanation

1. Project Title

Website Traffic Analysis Dashboard

2. Project Purpose

The purpose of Website Traffic Analysis is to study and monitor visitor activity on a website. It helps organizations understand:

How many users visit the website

Which pages are most popular

Where visitors come from

How long visitors stay

Which devices they use

How website performance changes over time

This analysis helps improve marketing strategies, user experience, and business decisions.

3. Project Objectives

Analyze website visitor behavior.

Track traffic trends over time.

Identify top-performing pages.

Compare traffic sources.

Measure user engagement.

Improve website performance through data-driven decisions.

4. Dataset Information

A typical dataset may contain:

Column Name

Description

Date

Visit date

Visitors

Number of visitors

Page Views

Total pages viewed

Session Duration

Time spent on website

Bounce Rate

Percentage leaving after one page

Traffic Source

Google, Social Media, Direct, Referral

Device Type

Mobile, Desktop, Tablet

Country

Visitor location

Conversions

Desired actions completed

5. Data Collection

Website traffic data can be collected from:

Google Analytics

Adobe Analytics

Website server logs

Marketing platforms

6. Data Cleaning

Before analysis:

Remove duplicate records

Handle missing values

Correct data types

Standardize date formats

Remove invalid entries

7. Key Metrics (KPIs)

Total Visitors

Number of people visiting the website.

Page Views

Total pages viewed by users.

Average Session Duration

Average time users spend on the website.

Bounce Rate

Percentage of users who leave without interacting.

Conversion Rate

Percentage of visitors completing a desired action.

New vs Returning Visitors

Comparison between new and existing users.

8. Dashboard Components

Header Section

Contains:

Project Title

Date Filters

Website Name

KPI Cards

Display:

Total Visitors

Total Page Views

Bounce Rate

Conversion Rate

Traffic Trend Chart

Shows visitor growth over time.

Traffic Source Analysis

Compares:

Organic Search

Direct Traffic

Social Media

Referral Traffic

Device Analysis

Shows traffic from:

Mobile

Desktop

Tablet

Geographic Analysis

Displays visitor locations by country or region.

Top Pages Analysis

Shows:

Most visited pages

Page views

User engagement

9. Visualizations Used

Line Chart

Shows visitor trends over time.

Bar Chart

Compares traffic sources.

Pie Chart

Displays device distribution.

Map Visualization

Shows visitor locations.

KPI Cards

Highlights important metrics.

10. Analysis Process

Step 1

Collect website traffic data.

Step 2

Clean and prepare data.

Step 3

Create calculated metrics.

Step 4

Build visualizations.

Step 5

Analyze user behavior.

Step 6

Generate business insights.

11. Findings (Example)

Mobile users contribute 65% of traffic.

Organic search generates most visitors.

Homepage receives highest page views.

Bounce rate is higher on landing pages.

Weekend traffic is lower than weekdays.

12. Recommendations

Improve high-bounce-rate pages.

Optimize website for mobile devices.

Invest more in successful traffic sources.

Improve page loading speed.

Enhance content on popular pages.

13. Tools Used

microsoft.com

powerbi.microsoft.com

tableau.com

analytics.google.com

Python (Optional)

14. Project Workflow

Data Collection

Data Cleaning

Data Transformation

KPI Calculation

Dashboard Creation

Traffic Analysis

Insights & Recommendations

15. Project Conclusion

The Website Traffic Analysis Dashboard provides a complete view of website performance. It helps businesses understand visitor behavior, identify traffic sources, improve user engagement, and increase conversions. By analyzing website traffic data, organizations can make informed decisions to improve their online presence and achieve business goals.

Reasoning >

I'll create a Website Traffic Analysis dashboard application for you. Let me start by exploring the project structure and available design system components.

Worked with 4 files >

Reasoning >

Reasoning >

I've created a comprehensive Website Traffic Analysis dashboard with the following features:

Key Metrics Cards - Display total visitors, page views, bounce rate, and average session duration with weekly trend indicators.

Traffic Over Time Chart - Area chart showing visitor and page view trends over the past week with date-based x-axis.

Traffic Sources Breakdown - Pie chart visualizing where visitors come from (organic search, direct, social media, referral, email).

Device Analytics - Progress bars showing traffic distribution across desktop, mobile, and tablet devices.

Top Pages Table - Lists the most popular pages with page views, average time on page, and bounce rate metrics.

Time Range Selector - Dropdown to filter data by 24 hours, 7 days, 30 days, or 90 days.

The dashboard uses mock data for demonstration and follows your theme colors. All components are responsive and ready to be connected to real analytics data when needed.
